

HomeInformationCenter

PDA
MCE
iPhone

HomeInformationCenter is the visualization of the eibPorts for the PDA, MCE (Media centre edition) and the iPhone. The HIC connects you with the complete functionality of the EIB/KNX. With your PDA, television or mobile telephone you operate and steer light, heating, Venetian blind and the music-/ DVD account comfortably, openly and cheaply.

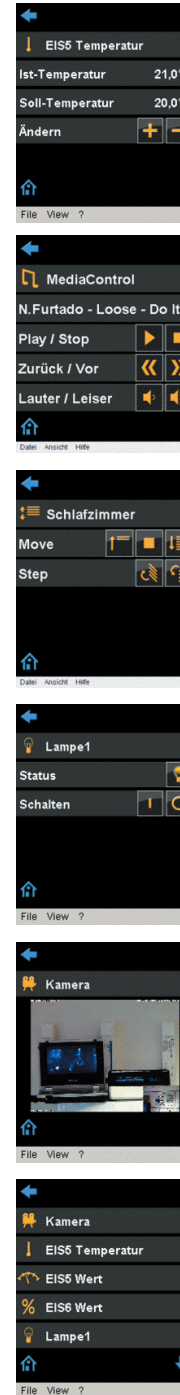

Add On for eibPort

The HomeInformationCenter has been developed for the eib-Port as Add On especially and cooperates with this perfectly.

The project planning of the HIC is carried out in usually simple way in the editor of the eibPorts. You can freely determine and adapt the tree structure of the HIC to your individual ideas or to the building structure.

You are mobile and informed about the happening in your house at the same time with the HomeInformationCenter. Thanks to value display and camera integration you always are up to date with these media.

Performance range:

Room temperature display
with debit and actual value as well as debit value change.

Media control
play, stop, loud, quiet and info line with artist, album and title, play lists
